

Building Inspector Step Code Workshop

Demonstration and Home Tour

The BC Energy Step Code is a voluntary provincial standard for achieving more energy-efficient buildings via measurable, performance-based requirements and code compliance verification processes for new construction. This interactive workshop is for building inspectors and local government staff.

- Learn about the purpose and vision of the Step Code.
- Understand, through practical language and home tour examples, how the Step Code metrics are used to measure the performance of the building and verify code compliance.
- Learn about the role of energy advisors and energy modellers in supporting builders to find the most cost effective and consumer-preferred options to meet and beat Step Code targets.
- Understand how building officials will use the BC Energy Compliance Report as a code compliance verification tool.
- Review information about financial incentives available for building to BC Energy Step Code requirements for mid-construction blower door testing, energy modelling, and building to Step 4 and 5.
- Have your questions answered by experienced industry professionals and Township of Langley staff.

Tuesday, August 27, 2019

12:30pm - 3:30pm
